GIGABYTE Z97MX GAMING 5 OZMOSIS DSDT BIOS F6 10.14-10.15

Beitrag von „529664321“ vom 25. Juli 2019, 15:17

Mojave10.14.6

Mac Pro6.1

CPU i7-4790k

Z97mx

HD4600 + RX560

Atheros Killer E2200

ALC1150

This BIOS has built-in sound card, network card, HD4600, USB3.0! Fixed AppleLPC! If you want to load x86, please put the attachment SSDT into EFI! Note HD4600: Please set the memory capacity of the core graphics card in the BIOS, set to 32M or 64M, otherwise the card Apple LOGO can not be started! ! !

What isn't working for you?

Which macOS are you trying to start.

Which GPU, CPU are you using?

Please fill in your Profile.
