GIGABYTE Z97MX GAMING 5 OZMOSIS DSDT BIOS F6 10.14-10.15

Beitrag von „529664321“ vom 25. Juli 2019, 15:17

The image shows a screenshot of the macOS Mojave system information window. The top navigation bar includes tabs for '概览' (Overview), '显示器' (Displays), '储存空间' (Storage), '内存' (Memory), '支持' (Support), and '服务' (Services). The main content area displays the following information:

- macOS Mojave**
版本 10.14.6
- Mac Pro (Late 2013)
- 处理器 4.3 GHz Intel Core i7
- 内存 8 GB 2133 MHz DDR3
- 启动磁盘 MacintoshHD
- 图形卡 Radeon RX 560 4 GB
- 序列号 F5KSD23KF9VM

Buttons for '系统报告...' (System Report...) and '软件更新...' (Software Update...) are visible below the system information.

Below the system information, a file browser window is open, showing a directory structure with files like 'EFI', 'APPLE', 'Oz', 'Acpi', 'Dump', 'Load', 'SSDT-XCPM.aml', 'Darwin', 'Extensions', 'Common', and 'WhateverGreen.kext'. The 'SSDT-XCPM.aml' file is highlighted, showing a size of 187 bytes and a modification date of 2017年5月26日 上午8:45.

On the right side, a 'GPU 信息:' (GPU Information) panel is open, displaying the following details:

名称	值
图形卡	Intel HD Graphics P4600
设备 ID	0x04128086
基本显存	1536 MB
硬件加速 (QE/CI)	Yes
Metal 加速	Yes
VDA 解码器	完全支持

The GPU information panel also includes a barcode and the HEADSOFT logo at the bottom.

Mojave10.14.6

Mac Pro6.1

CPU i7-4790k

Z97mx

HD4600 + RX560

Atheros Killer E2200

ALC1150

This BIOS has built-in sound card, network card, HD4600, USB3.0! Fixed AppleLPC! If you want to load x86, please put the attachment SSDT into EFI! Note HD4600: Please set the memory capacity of the core graphics card in the BIOS, set to 32M or 64M, otherwise the card Apple LOGO can not be started! ! !

oasiriccio@gmail.com

What isn't working for you?

Which macOS are you trying to start.

Which GPU, CPU are you using?

Please fill in your Profile.
