**Beitrag von „Peppe8“ vom 27. August 2020, 00:25**

Hello,

I need someone to help me out for the EFI of this configuration.

I tried many of them with no success.

All of them stucked in first verbose lines or directly reboot after selection on GUI.

Please help me!

thanks in advance.

Try this ->

Hello Ralf,

thanks, but not working. Picture attached.

my mobo should have chip X570

Try this EFI für B550

[OpenCore Sammelthread \(lauffähige Konfigurationen\) Desktop](#)

Or this for 570 <https://www.hackintosh-forum.d.../148131-efi-bs-beta4-zip/>

Hey! thanks a lot man! first one worked flawlessly.

I have something to repair but I installed at least!

Second one not working anyway.

Thanks again!
