

Perfectionist needs help (DSDT)

Beitrag von „valenb“ vom 11. Oktober 2020, 07:34

First of all, sorry for writing in english, i dont know where else to ask. hi! so i have my hp x360 on catalina with opencore 0.6.1. everything is running ok so far, but since i'm a perfectionist i want to compile my own DSDT. I've managed to boot and install big sur, MaciASL says there is not errors, [but when i boot it stops at this error](#). Any help is thanked! [here are the DSDTs](#).

Welcome to "Hackintosh-Forum.de"!

Please upload your attechments (again) here in the forum, it`s the button below called "[Dateianhänge](#)", then "hochladen".

We don`t like other filehosters cause files get lost too often.

I don't get the point for creating a DSDT for this particular Laptop. It doesn't need one at all.
