info install Desktop Dell 7010 e 9010

Beitrag von „riky67" vom 28. September 2021, 10:31

Code

1. Hi I am Italian and I would like to have info on how to install osx on two Dell optiplex (7010 and 9010). I have doubts about what to install as the intel processor GPU may have problems (as I actually have). I created two usb keys One with catalaina (The installation continues until finalization (third reboot where it requires user and language choice) I have only the mouse and black screen and artifacts in the upper left. With the installation of moajve the second reboot shows me again the reinstallation (second reboot) Help me ?? WITHOUT additional video card what do you recommend ?? can someone give me the UEFI folder ?? THANKS TO ALL

Which Hardware is in the PC?

Which bootloader did you Use?

Please dont Use the "Code" Format for your posts. 😉

Dll Optiplex 7010

OpenCore ver 070-2021-05-20

grazie

For the 7010, you usually need an eGPU, e.g. GT710, because of the HD-2500 iGPU in Your case.

Besides doing this, it`s a great hackintosh. 👍🙂

small problem When I get the login screen. Keyboard and Mouse freeze. I have to turn it off by holding down the power button. (At boot time of OC they work and I can select the boot device)

Beitrag von „assa9" vom 25. November 2021, 02:17

If Anyone wants an Opencore boot monterey THAT works, post a reply. I wont post the EFI unless someone wants it

HD4000 Dell 7010 9010. Note you will need to use the hd4000 patcher (or the tesler patcher) for full graphics. 🤪

i buy one GT 710 GPU ti helpme

Please sharing your efi??

Grazie
