

INFO install OSX on DESKTOP DELL Optiplex 9020

Beitrag von „riky67“ vom 29. September 2021, 16:30

After installing osx on Dell optiplex 7010 I would like to install osx on the higher model: the Dell optiplex 9020. Can you help me? Grazie

Which boot loader would you like to use?

Beitrag von „Raptortosh“ vom 29. September 2021, 22:21

This efi should work for your Hardware

<https://github.com/zearp/OptiHack>

It May not be the best idea to use a efi from someone Else (you dont have to Do anything yourself (if you have problems you dont know what to Do)).

You posted in "macos Big sur" but write "OSX" (Which only Was the Name until El capitan). What OS Do you want to use?

If you begin it is better to use opencore (Especially for Big sur and newer), because it's newer and has a good Guide Which should make the configuration easy (<https://dortania.github.io/Ope...config.plist/haswell.html>).

zearp's EFI not work , does not even start OC. I tried another efi where I can see the boot. Select Install Catalina But then it crashes with: "[

EB | `B: WFDW] ERR (0XE), 0 @ LOCHB 71B4903C-14EC-42C4-BDC6-CE1449930E49"
