

MSI Z390 TOMAHAWK - Intel® Core™ i3-9100F Processor - macOS Monterey step by step

Beitrag von „Lucas-38“ vom 7. Oktober 2021, 19:15

Hallo ,

i just join hackintosh-forum.de , for getting help and advice , to let me install and get working macOS Monterey.

Ich trete einfach hackintosh-forum.de bei, um Hilfe und Ratschläge zu erhalten, damit ich macOS Monterey installieren und zum Laufen bringen kann.

My Hardware :

- MSI Z390 TOMAHAWK
- Intel i3 (300 SERIES) 9100F (without internal Graphic GPU). **Coffee Lake** .
- Graphic Card Nvidia GTX 1050 .

I spent 23 days learning how to add KEXT and drivers , this is my EFI , to let EXPERT see if all is ok , to let me start installing macOS Monterey

Bootloader used: **Opencore** .

Thanks for every person here , who will try to help me get this working.

EFI created is here below.

With MacOS MONTEREY, the Nvidia GTX 1050 no longer works because there is no driver for it.

It is best to buy an AMD graphics card 😊

He uses an Nvidia Geforce GT 710 2 GB

<https://youtu.be/AacgFaWk544?t=255>

Edit:

[Lucas-38](#)

Try the EFI, I wish you the best of luck 😊

Vielen Dank OSX-Einsteiger

ich werde Sie über die Ergebnisse der Installation auf dem Laufenden halten; , ich zeige Ihnen hier einige Screenshots, damit Sie die Entwicklung der Dinge während der Installation von macOS Monterey sehen können

Thank you so much, I will keep you informed of the results of the installation, I will post here some captures so that you can see the evolution of things

Hallo ,

i'm on first installation using this EFI and i get this error.

Thank's to advice what's to do to FIX it.

Try to use Catalina. For big sur and Monterey you need to create first usb mapping.

After you have create the mapping it work with big sur and Monterey without issue
