

Anfrage aus dem HWC - Dell Latitude 7280

Beitrag von „wecler“ vom 31. Oktober 2021, 21:43

Anfrage an [Hecatomb](#)

Hello you both, I think it's easier if I use English for simplicity.

I have only two questions do Bluetooth and Thunderbolt (multiple screens) also work on this model?

Thanks.

I use a BCM94360NG Wlan Modul...But intel is possible to use too.

I don't have thunderbolt adapter/devices, so I don't test it jet. HDMI out work 100%.

I can speak only for Dell 7730:

Intel Wireless & Bluetooth Modul as build in AC 9260 is working.

With Monterey Wireless is working quite well the issue I have is the BT module there are still some issues.

The single Thunderbolt plugs will work once you started up it in Monterey. Thunderbolt hotplug in is not working.

In my point of view the key set point of Dell are the right SSDT ACPI configuration for that.

Just tested the Dell Dockingstation TB18DC works quite well with USB, HDMI etc. with Monterey plugged in before start up.
