

Hardware Compatibility

Beitrag von „cesifyo“ vom 15. Dezember 2021, 22:21

Hi guys, i want to make a Hackintosh, though i don't know if my Hardware is compatible so i would like to know how i can check that,

My specs are:

Processor: Intel(R) Core(TM) i7-10700 CPU @ 2.90GHz 2.90 GHz

Ram: 2x HyperX Fury 16gb(2x 8gb) 3200MHz DDR4 CL16 DIMM

Graphics Card: NVIDIA GeForce RTX 2060

PSU: LITEON 500W

Beitrag von „edifant“ vom 15. Dezember 2021, 22:26

[cesifyo](#) Geforce RTX 2060 is not supported. Have a look at <https://dortania.github.io/GPU-Buyers-Guide/>

Beitrag von „Hecatomb“ vom 15. Dezember 2021, 22:26

But he can use the igpu

Beitrag von „cesifyo“ vom 15. Dezember 2021, 22:29

@[edifant](#) so should i only replace my Graphics Card and it would technically work?

Beitrag von „edifant“ vom 15. Dezember 2021, 22:38

[cesifyo](#) as [Hecatomb](#) mentioned you can use your integrated iGPU of your I7-10700 if it's not 10700F or FK without iGPU

Beitrag von „cesifyo“ vom 15. Dezember 2021, 22:40

Thanks [edifant](#) & [Hecatomb](#), is there any tutorial to do it with the iGPU?

Beitrag von „edifant“ vom 15. Dezember 2021, 22:50

[cesifyo](#) depends on your motherboard and chipset / ACPI ie <https://github.com/augstb/Hack...0k-Gigabyte-Z490-Vision-G> for a Z490 Chipset or here inside Portal examples for Z390 chipsets.

You need to deactivate the nvidea card with boot arg. I go to bed now... Good luck
