

Lenovo Yoga C740 Stuck on MACH Reboot

Beitrag von „hanykamal“ vom 20. Januar 2022, 20:09

Hello, I have Lenovo yoga c740-15iml 81td

i5-10210U

12GB Ram

and I try to install bug Sur Using this EFI but was stuck on MACH Reboot please Help.

[Lenovo Yoga C740](#)

Please Help

Beitrag von „EdD1024“ vom 21. Januar 2022, 07:51

Hi,

You will probably need to re-create ACPI files since probably your specs differ compared to the other one.

I started refreshing the EFI for Monterey for this laptop but didn't finish yet, I'll post it here as soon as I have something.

Cheers

Beitrag von „hanykamal“ vom 21. Januar 2022, 17:34

Thank you so much

After researching all night long finally I find a way to dump my DSDT.aml, and I attached it may help you create an ACPI for me. I don't know how to create it and I appreciate your help, thank you so much.

attached is my laptop space from CUPz Program.

also, I replaced my wifi Card with [BCM94352Z](#).

Beitrag von „hanykamal“ vom 25. Januar 2022, 17:41

Any Updates Sir. do you have a chance the build it?

Beitrag von „hanykamal“ vom 7. Februar 2022, 21:08

Any update, I'm still waiting for help please

Beitrag von „hanykamal“ vom 28. Februar 2022, 17:42

Can someone help me or provide a guide to follow for Lenovo C740 please, I really need help!

Beitrag von „apfel-baum“ vom 28. Februar 2022, 18:13

hello [hanyang](#) ,

if you are able to use the searchengine of your choice , there will be some results, for example

- <https://github.com/ThrRip/Open...op-Lenovo-YOGA-C740-14IML>

- <https://github.com/2Sea-cat/C740-14iml-BigSur>
- <https://github.com/frozenzero1...op-Lenovo-Yoga-C740-14IML>

of course the factor of teach, how to help yourself, maybe would not match..,

in this case consider the dortania guide if you like opencore-
<https://dortania.github.io/OpenCore-Install-Guide/>

...

greetings

Beitrag von „OSX-Einsteiger“ vom 28. Februar 2022, 20:02

[hanykamal](#)

Please install with Catalina first, you have to do a USB mapping with Catalina.

Please do not be angry with me if it does not start up 😊

Beitrag von „hanykamal“ vom 28. Februar 2022, 20:49

Thanks so much, I will test it and let you know.

I will never be angry I am glad you helped, did you use my laptop [DSDT.aml](#) to build the ACPI,
Sorry I'm new to Hackintosh and don't know much.

Beitrag von „OSX-Einsteiger“ vom 28. Februar 2022, 20:57

No I have not taken the SSDT

Beitrag von „hanykamal“ vom 28. Februar 2022, 21:13

Can you adjust it according to my DSDT.aml or send me a tutorial on how I can do it, or do you want me to try the EFI folder that you send me first?

Thanks again and I really appreciate your time and effort.

Beitrag von „OSX-Einsteiger“ vom 28. Februar 2022, 21:19

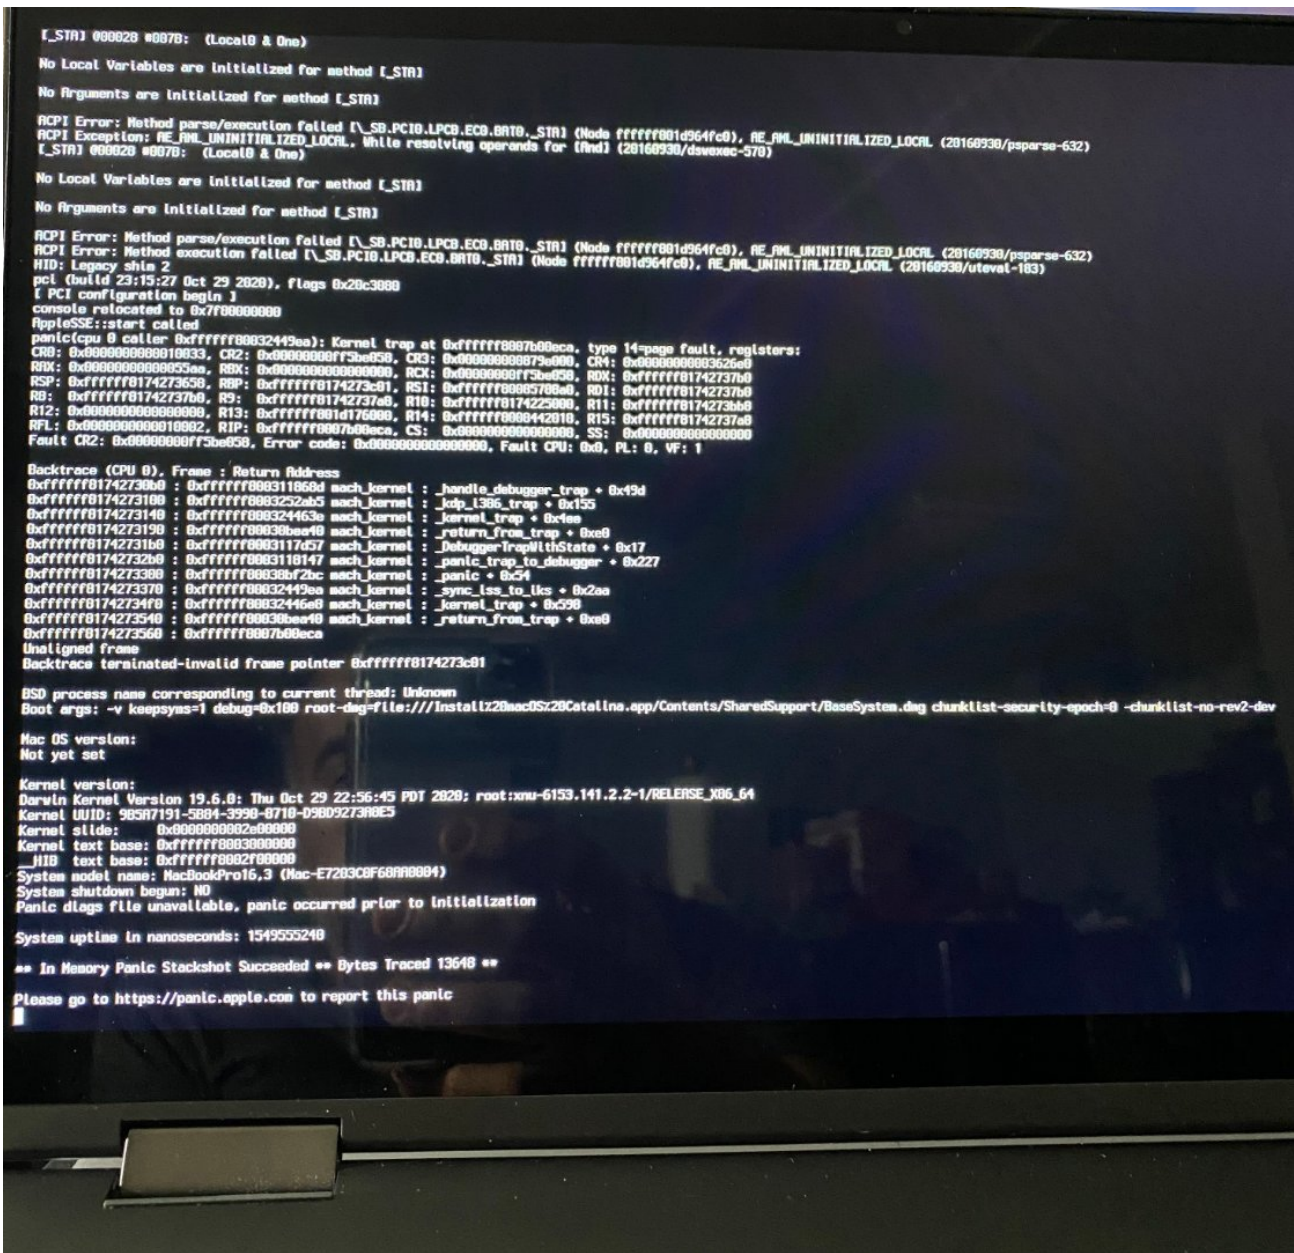

Try it first with the EFI only, if it doesn't boot then post the log you find on the USB stick. 😊

Beitrag von „hanykamal“ vom 1. März 2022, 06:10

hello Sir, i tried the the EFI you send me and stuck on this page

Please advide

[opencore-2022-02-28-205014.txt](#)

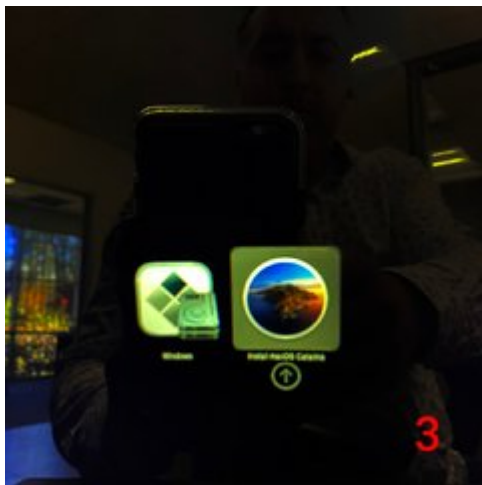

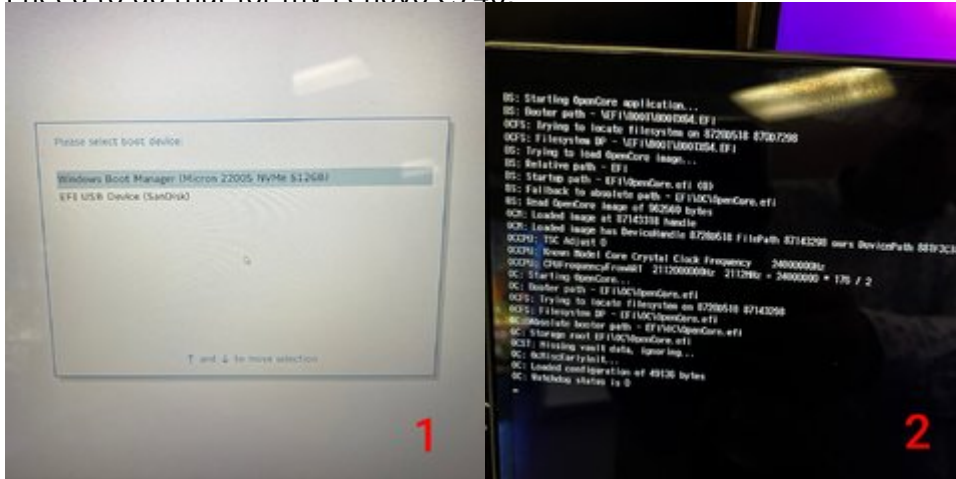

Beitrag von „OSX-Einsteiger“ vom 1. März 2022, 20:22

Please do a nvram reset , you can find it in the OpenCore menu

Beitrag von „hanykamal“ vom 1. März 2022, 21:09

Hello, I can't find NVRAM Reset, I didn't even install **Catalina yet**, it's stuck on the USB Boot, please check the attached images, also while I'm searching on google I found "**unlock CFG**" do I need to do that for my Lenovo C740.

Beitrag von „OSX-Einsteiger“ vom 1. März 2022, 21:30

try again with the nvram reset

Beitrag von „hanykamal“ vom 1. März 2022, 21:59

I did reset the RMVram and stuck it on the new page. please check!

[opencore-2022-03-01-125524.txt](#)

Beitrag von „OSX-Einsteiger“ vom 1. März 2022, 22:03

'll redo the OpenCore EFI again for security reasons, that will probably be nothing more today.

Beitrag von „hanykamal“ vom 1. März 2022, 22:09

Ok, Sir, Thank you for helping me, I appreciate it!

I will be waiting.

Here is My DSDT if needed.

Beitrag von „EdD1024“ vom 2. März 2022, 12:24

This is my EFI for the C740. I'm not sure how well it is working, I think sleep still does not so you will also probably have to adopt it to your needs, as it is a different model. I strongly advise you to deactivate pcidevices.aml as it probably doesn't fit to your laptop.

System Info	
Host	C740.local
OS	macOS Catalina Version 10.15.7 (Build 19H1715)
Kernel	Darwin 19.6.0 x86_64
RAM	16.00 GB
Model Identifier	MacBookPro16,1
CPU	Intel(R) Core(TM) i7-10510U CPU @ 1.80GHz
Intel Generation	Coffee Lake

Unpack the EFI with Keka. You might have to rename them to EFI.zip.001 and EFI.zip.002

It will probably not work but this is the most I can do at the moment.

Cheers

Beitrag von „hanykamal“ vom 2. März 2022, 18:01

hey bro, i tried it, and doesn't boot to repot to the Lenovo logo, nothing work sir

I know i ask too much but I will wait for Mr. [OSX-Einsteiger](#) to help me with EFI

Beitrag von „OSX-Einsteiger“ vom 2. März 2022, 19:35

Try the config.plist 😊

Beitrag von „hanykamal“ vom 2. März 2022, 20:03

Thanks [OSX-Einsteiger](#)

But still stuck on the same page, Please check the attached file.

Beitrag von „OSX-Einsteiger“ vom 2. März 2022, 20:35

I have recreated the EFI

Beitrag von „hanykamal“ vom 2. März 2022, 21:15

Thank you, Sir

But still stuck in the boot I think something with CFG lock, I'm not sure!

Beitrag von „EdD1024“ vom 2. März 2022, 21:20

That shouldn't matter with my config.

Beitrag von „hanykamal“ vom 2. März 2022, 21:23

Did you check the [https://www.hackintosh-forum.d...re-2022-03-02-115100-txt/](https://www.hackintosh-forum.de/threads/55738-lenovo-yoga-c740-stuck-on-mach-reboot/)

what's different between EFI 001 EFI 002

Could you please upload them again, for somehow I cant unpack them I got an error even when I use keka

Beitrag von „EdD1024“ vom 3. März 2022, 08:30

- Rename them to EFI.zip.001 and EFI.zip.002
 - Unpack with keka
 - It should unpack into a regular EFI
-

Beitrag von „hanykamal“ vom 3. März 2022, 17:27

I did Use your EFI Folder, But I Dumped my own SSDT-AWAC - SSDT-EC - and SSDT-PLUG using [SSDTTime](#) .

But it reboots to the Lenovo logo after lots of ok text comes on the screen.

Here is my EFI Please Advice. <https://ufile.io/elawnfkv>

Beitrag von „EdD1024“ vom 3. März 2022, 18:17

It's always better to do it from the scratch, at my end it was never expected it would work with my EFI.

Having said that, such a sudden reboot indicates there might be something set wrong in your BIOS. Unusual but it works here

- Intel SGX Control is set to "Software Controlled" instead "Disabled"
- Secure Boot is Enabled
- Secure Boot Status says Disabled

This is not rocket science just follow any guide covering any other laptop with your CPU and simply create and use your own configuration files.

Beitrag von „hanykamal“ vom 4. März 2022, 20:09

Finally, I got it to boot and I installed the Catalina!

The problem the SSD was not compatible I found out that is Micron 2200S, Many users have reported boot issues with this drive.it boots, but the Wifi not working, the Sound is not Working, The Graphic Display 7Mb.I have a wifi Card [BCM94352Z](#)The Touch Screen was working but when I Copied the EFI from USB to Colatina EFI Folde the touch screen stopped working.
