Resize boot logo after upgrade

Beitrag von „Macko" vom 18. Mai 2022, 14:43

After updating to Mac Monterey 12.4. a large apple logo will appear on the Mac mini M1 when you turn on your PC and boot. It looks awful.

The previous version was OK.

It looks like a low-resolution boot. Does anyone have a similar experience with this and can it be changed ?

Thanks for the advice.

I don't really understand. Do you have the problem on a hackintosh or on an M1?
if it was the M1 it would be better you ask your question on the apple support forum.

From the hackintosh side, I haven't such a problem because we are able to set the resolution in the open core config.

On an M1 it should be an nvram problem or if this couldn't help a firmware issue.
