hello [mohammedjasaam](#) ,

congratulations to your first post and build, is it a windows/osx dualboot/tripleboot? if it is a osx boot, so you can delete the microsoft part of the current efi,- and it will fit as attachment.

greet's 😊

edit-

it seems to be a multiboot of osx/windows/kylin

Beitrag von „mohammedjasaam“ vom 11. August 2023, 22:21

Thank you [apfel-baum](#)...The EFI file has been edited and linked to.

---

### **Beitrag von „apfel-baum“ vom 11. August 2023, 22:30**

die efi als board anhang

the current efi as attachment

-----

lg 😊

---

### **Beitrag von „mohammedjasaam“ vom 11. August 2023, 22:42**

Thanks again [apfel-baum](#)..Although I tried to attach it to the post, but there is a limit to the file size..It looks like it's only allowed for admins.

---

### **Beitrag von „apfel-baum“ vom 11. August 2023, 22:50**

yes, it is , i made an oc current 0.9.4.dev build maybe it works too-with german keyboard-layout

----

you can test it, maybe it works,

greetz

edit-

--

if you own an us-keyboardlayot you habe to change the nvram-posution

---

### **Beitrag von „mohammedjasaam“ vom 11. August 2023, 22:56**

It will definitely work ... And greetings to the German monster open SUSE from Linux...Haha

---

### **Beitrag von „apfel-baum“ vom 11. August 2023, 22:58**

I've just renamed the "efi\_\_"-folder to "efi"

greetts 😊

--

edit-

i prefer an debian build like bodhi or mx-linux 😊 small and efficient

---

### **Beitrag von „mohammedjasaam“ vom 11. August 2023, 23:10**

Yeah **apfel-baum**.. MX Linux is simple and does not consume computer resources and at the same time powerful and occupies the first place in the Distrowatch website.

It's late and it's time to go to bed before the electricity supply stops..It's very hot today at noon the temperature reached 50 Celsius ...The electricity situation in Iraq is very underdeveloped...The country's administration is corrupt to the core...Good night.

I 've updated the PList to the OC 094-Version and dropped some mistakes from OpenCore Validator. And made new unused Serials and UUIDs..

كل اركش

Thank you

Is it required not to include only the serial number?

Good morning may I ask for some help.

I am installing the system, with the updated EFI file from the attachment in the previous posts.

Everything is proceeding correctly, when the system gets to 12 minutes to go it reboots, a black screen comes out with a message that I attach and it keeps rebooting the notebook always with the same message in a continuous loop.

Can you help me. Thank you.
