salam [mohammedjasaam](#) .

thanks for sharing EFI.

can you share the Geekbench 5 score of your Hackintosh?

your EFI not working for my Zbook 17 g5 4k. probably because of the 4k display.

but by using EFI built from scratch and another one was found on the web, my Hackintosh do not have the performance same as Windows.

in Windows single score is about 1500, and multicore is 5200.

but on Mac, the single is 1000 and multicore is 4400.

also, I compare Android studio build time. in my case on Windows, it take about 1min but on Mac, it takes 1min and 30 seconds.

about a 50% performance difference.

I had another Hackintosh before and the performance was equal or even better.
can you please check your geekbench 5 score too?

maybe by disabling CFG-Lock we have better performance.

I try to disable CFG Lock but it seems can not do that on this machine.
