

Dell Latitude 7280 - MAC OS SONOMA

Beitrag von „alex19400“ vom 5. Juni 2024, 00:59

Hello people,

Sorry for writing in English but I do not speak German and I do not want to confuse you with translator.

As I cannot register in other places this is the only forum with open registration.

Simply to put the issue: I want to turn my laptop into "hackintosh" as to learn to code on SWIFT and use Microsoft Office, etc. I do not have the money to buy MacBook so I want to turn this laptop into one.

Could you please provide me with full guide?

I tried by myself with OpenCore following their guide but was not able to get the setup started due to different errors.

I have used GenSMBIOS-master and ProperTree-master when it was needed, also a 64GB usb stick.

laptop specs;

Intel Core i7 vPro 7600U

Intel HD 620

16 GB RAM

512 GB SSD

Thank you in advance for the help I just want to learn coding and other things but cannot afford Mac as I had mentioned

[alex19400](#) ,

take a look, to inspire yourself, with the searchengine of your trust- for example the duck
