Change the macOS boot screen

Beitrag von „pupokass" vom 19. Oktober 2024, 18:37

I have a MacBook Pro mid 2012 with OCLP installed I want to change the Apple logo and background from black to gray is it possible?

[pupokass](#)

maybe this works

- https://github.com/w0lfschild/DarkBoot

lg 🙂

i'm not responsible for a broken computer after that option. no promise if it works

Thanks but as I understand this program changes the logo in the firmware and not the system itself because it shows me a gray logo and not the white one that is used now

Natürlich ist es möglich, mit Opencore die Farbe des Hintergrunds zu ändern.

Nimm das was dir gefällt.

When I do this only the BootPicker background changes but the startup background does not
What should I do?
